

# ANTIBACTERIAL Range

## Antibacterial devices and cover plates

The antibacterial properties of the specific devices and cover plates of the MÀTIX series are due to the formulation of the materials, based on silver ions (Ag<sup>+</sup>). This technology ensures the non proliferation of bacteria, viruses, fungus, without creating immunization or resistance effect (physical rather than chemical destruction). The ideal use for MÀTIX antimicrobial devices is in medical surroundings (hospitals, nursing homes, consulting rooms, diagnostic rooms and similar), public buildings (old peoples' homes, nurseries, toilet facilities, etc.) or catering facilities (canteens, bars). The effectiveness of BTicino antimicrobial products has been confirmed by specialist labs. It is nevertheless recommended that the devices are kept clean, to ensure perfect hygiene.

# ANTI-REMOVAL cover plates

## Anti-removal cover plates

These cover plates are supplied with appropriate support, to which they are fastened using 4 TORX cut screw. The assembly creates an anti-tamper light point, recommended in non supervised areas open to the public.
